Table B5-2. Stratified mean sea scallop survey data for Georges Bank, Mid-Atlantic Bight and combined (40+ mm shell height). Calculations include corrections for survey dredge selectivity (NEFSC 1997). Population values were split into recruited and not recruited portions using the piecewise linear commercial dredge selectivity function (NEFSC 1992).

Year	Num/Tow	CV	Num/tow Not Recruited	Fully Recruited	Biomass g/Tow	CV	Biomass Not Recruited g/Tow	Fully Recruited g/Tow	Mean Meat Weight (G)
